**How A Bottom-Up Design Approach Enhances Site Accessibility**  
20 by hello@smashingmagazine.com (Eleanor Hecks) / 21d  
Accessibility is key in modern web design. A site that doesn't consider how its user experience may differ for various audiences — especially those with disabilities — will fail to engage and serve everyone equally. One of the bes...

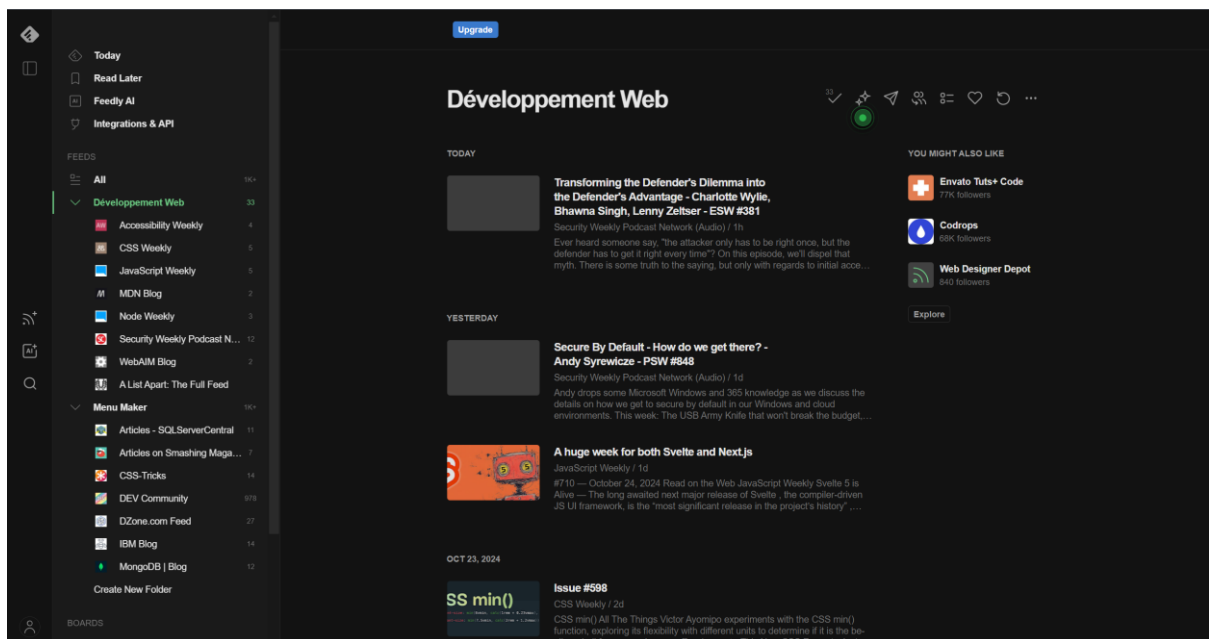

**How To Manage Dangerous Actions In User Interfaces**  
by hello@smashingmagazine.com (Victor Ponamarev) / 27d  
By definition, an interface is a layer between the user and a system, serving the purpose of communication between them. Interacting with the interface usually requires users to perform certain actions. Different actions can lead ...
